

## MEMBERSHIP BENEFITS

- › Become part of a global network in a fast-growing industry
- › Gain access to the best expertise across technologies and markets
- › Place your energy storage topics in the public and expert communities
- › Apply exclusive market intelligence for investment and marketing
- › Network with industry experts in specialist and working groups
- › Be part of a strong voice addressing key industry policy decisions from the early stage
- › Become a driver of the Energy Transition and a part of the solution to the climate crisis

# GREEN ENERGY TO THE POINT

Want to become a part of the association of energy storage experts, founders, and visionaries?

## OUR MEMBERS

Our members represent the entire value chain of energy storage systems: R&D, manufacturing, operation, certification, regulation, financing, and insurance.

Firmly believing in the Energy Transition and technological solutions from the start, they established “Made in Germany” storage technologies as a quality mark internationally.

◀ BVES Executive Committee and Managing Board together with the BVES expert team at the annual strategy meeting.

## OUR HISTORY

Founded in 2012 by the pioneers of the German energy storage industry, BVES is now a fast-growing trade association. With over 300 member companies and organizations from Germany, Europe, and internationally, BVES is the No. 1 network for the interests of the whole energy storage industry and value chain.

BVES represents all energy storage technologies in the electricity, heat, and mobility sectors for the household, industrial and infrastructure markets. Over the decade, BVES has built and established a strong network of SMEs, start-ups, and international corporations from all industrial sectors: renewable energy, chemical industry, infrastructure, automotive, finance, etc.

## OUR WORK

### A voice at the table

With the advancing energy transition, the industry faces new and quickly evolving needs and challenges across a variety of regulatory agencies at the German, European, and international levels. The experts of BVES directly engage with regulators and institutions, participate in committees and boards across agencies, as well as in certification bodies, and bring crucial energy storage topics to the political table.

### Information hub & think tank

BVES conducts market research and annually releases the key figures of the storage industry of all sectors. BVES is the first point of contact for the media and the public on the topic of energy storage.

## OUR GOALS

Every day we work to create a stable fundament for the dynamically growing energy storage industry, to identify and remove market barriers at national, European, and international levels, and to develop generally accepted standards and norms.

We believe in energy storage systems as an indispensable part of the carbon-free future energy system.

## ORGANIZATIONAL STRUCTURE OF BVES

**BVES Executive Committee / Managing Board**

**BVES Departments with working groups on special topics:**

Markets & Technologies

Standards & Certification

Politics

Law & Regulation

Communication
